

# Informational System to Support Development and Usage of Linux Interface Standards

**Denis Silakov**

**Institute for System Programming, RAS**

<http://ispras.ru/>

**Linux Verification Center**

<http://linuxtesting.org/>

SYRCoSE 2010. 1-2 June, 2010, Nizhny Novgorod

# Linux Ecosystem

- ◆ System components ~ 5.000  
(kernel, libraries, utilities, ...)
  - ◆ developed independently
  - ◆ “release early, release often”
- ◆ Distributions ~ 500
  - ◆ based on “upstream” system components
  - ◆ add their own patches
  - ◆ a set of selected applications
- ◆ Applications ~ 10.000
  - ◆ want to run on many distributions

# Components in Distributions

Distributions released November, 2009

*Component versions and number of functions exported by component libraries*

	Mandriva 2010	Fedora 12	openSUSE 11.2
GLIBC	<b>2.10</b> 2275 functions	<b>2.11</b> 2283 functions	<b>2.10</b> 2275 functions
GTK	<b>2.18.3</b> 4518 functions	<b>2.18.3</b> 4915 functions	<b>2.18.1</b> 4915 functions
ALSA	<b>1.0.21</b> 1623 functions	<b>1.0.21</b> 1623 functions	<b>1.0.21</b> 1609 functions

# Application Portability

- ◆ Thoroughly test in every system
  - ◆ by application developers
  - ◆ by maintainers in distributions
  - ◆ **requires significant resources**
- ◆ Give source code to users
  - ◆ also necessary for distribution maintainers
  - ◆ **not everyone wants to share source code**
- ◆ Follow standards
  - ◆ API – recompile for every system
  - ◆ ABI – use binary executables and libraries 'as is'
  - ◆ **development of a standard can be a challenge**

# Modern Interface Standard

## ◆ Target Area

- ◆ A Linux distribution: **1.500** libs, **1.000.000** functions
- ◆ Applications use from **10** to **10.000** functions
- ◆ POSIX: **1.500** functions, LSB: **40.000** functions
- ◆ **How to select what to standardize?**
- ◆ **Profiles?**

# Standard Environment

- ◆ Accompanying Products
  - ◆ Test suite
  - ◆ Build environment
  - ◆ Sample implementation
  - ◆ ...
  - ◆ **Should be kept synchronized**

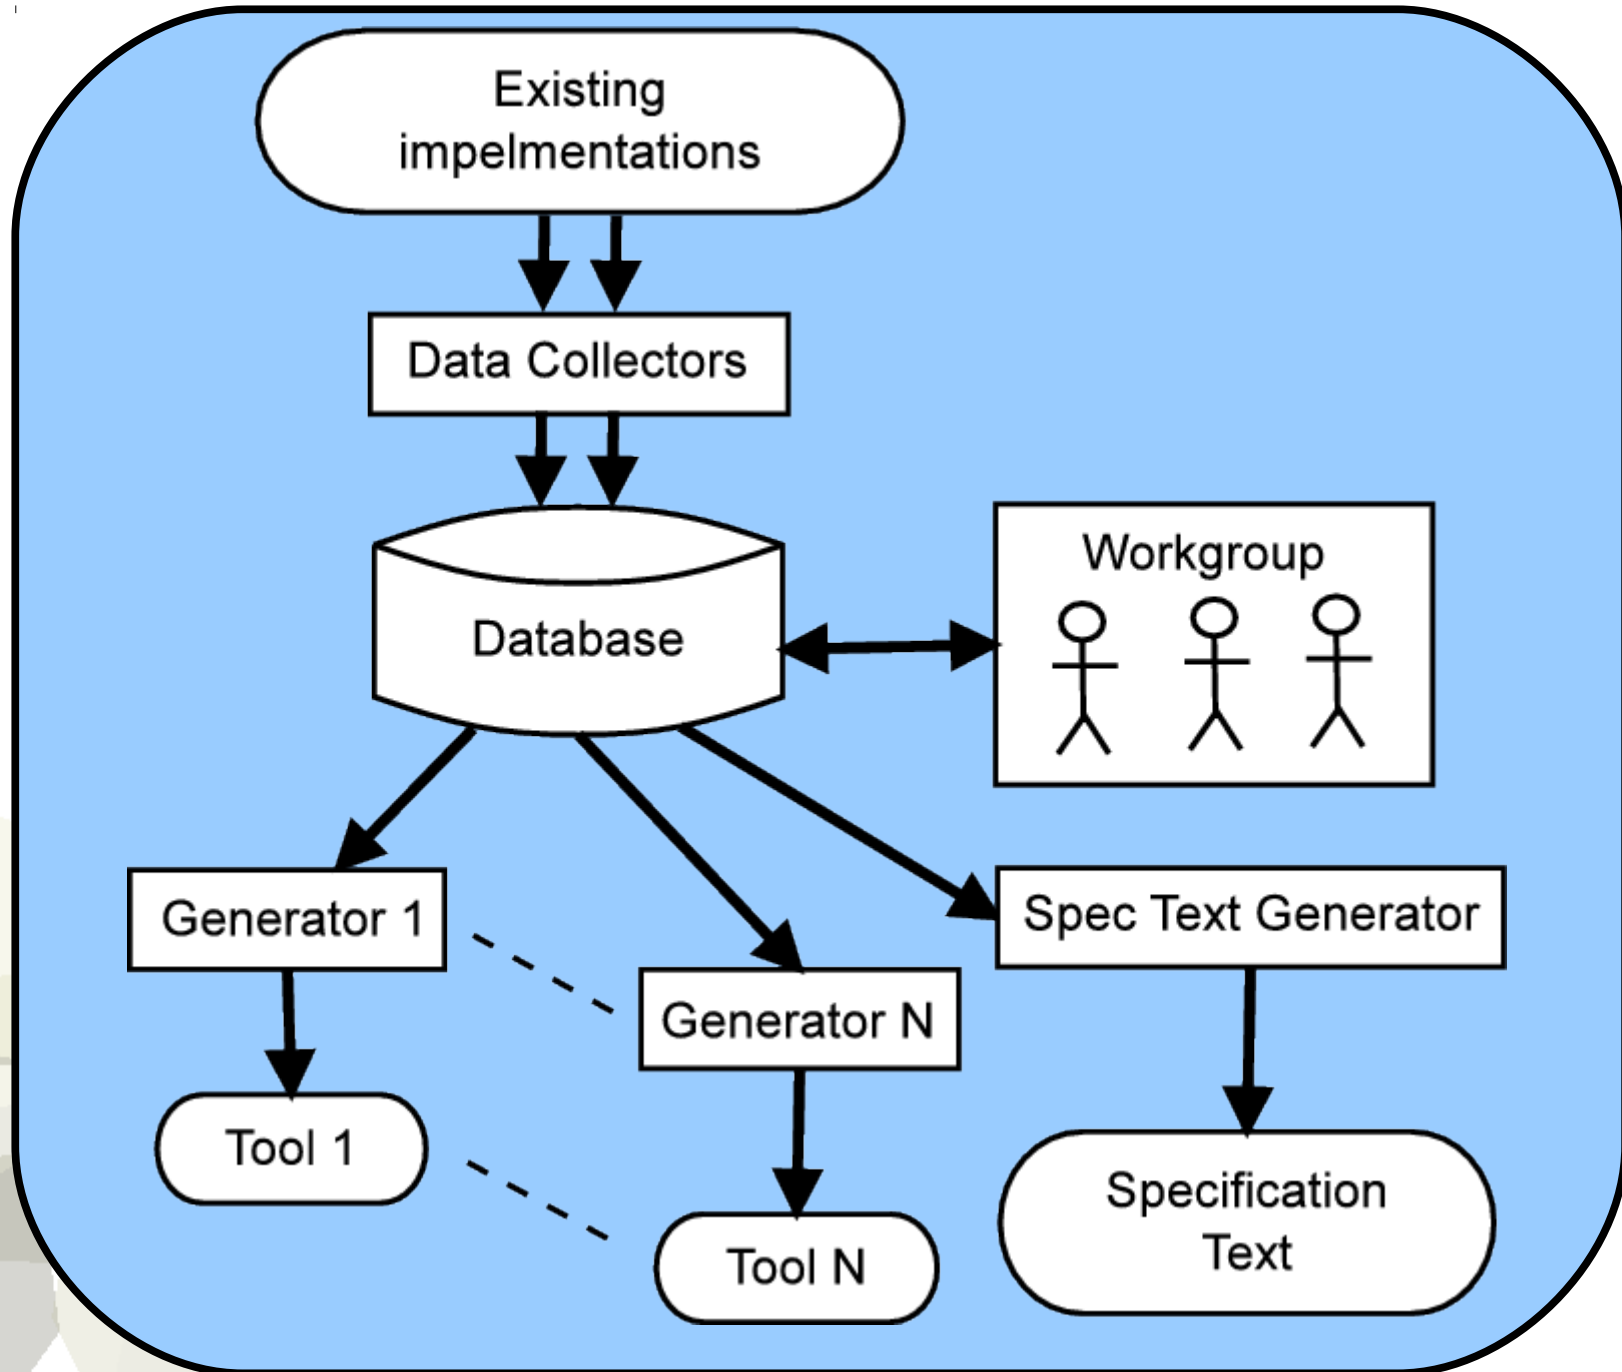

# Developing a Standard

- ◆ Constant monitoring of the Linux Ecosystem
  - ◆ Interfaces provided by leading distributions
  - ◆ Interfaces used by popular applications
  - ◆ **Can be automated**
- ◆ Selection of candidates for next Standard version
  - ◆ Formal rules based on the monitoring results, e.g.:  
*interfaces present in all systems released after 2008*
  - ◆ **Can be automated, too**
- ◆ Finalization of list of candidates, manual actions
  - ◆ Create documentation
  - ◆ Develop tests
  - ◆ ...

# Workflow

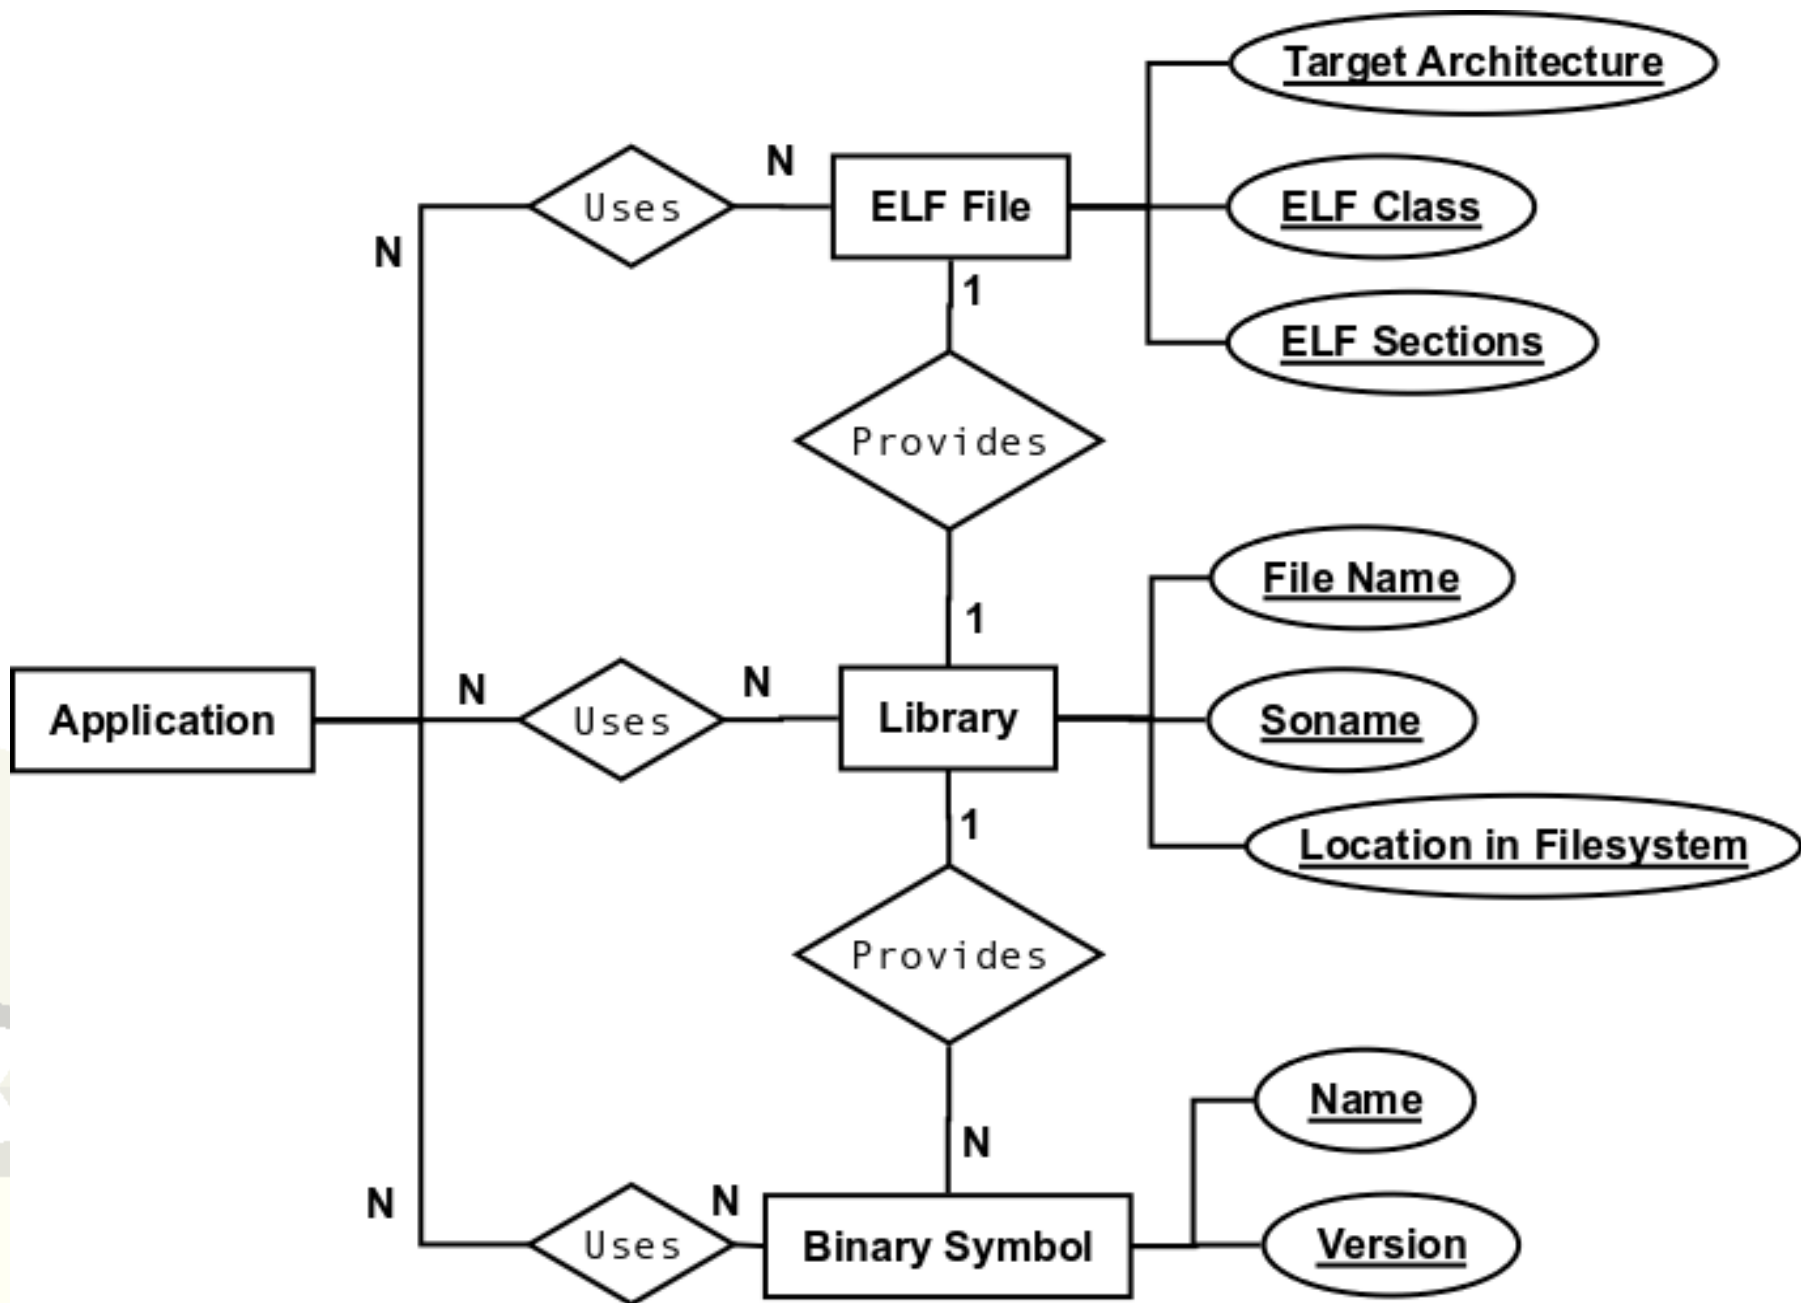

# Interface Properties

We consider **binary** applications only

- ◆ Structural – can be analyzed statically  
*e.g., synopsis of functions in header file*
- ◆ Semantic – require interface invocation to be analyzed  
*e.g., function behavior*

Analysis of structural properties is enough to check if application can be **launched** in distribution

# Model of Linux Interfaces

## Temporal Relationship Model (TRM)

- ◆ Extension of 'usual' relational model
- ◆ Life period for every element:  $[T_s \dots T_e]$ ,  
possible values for  $T_s \dots T_e$  –  
– standard versions + NULL
- ◆ Can be served by relational DBMS,  
but improvements required in tools  
that work with database

# Time Intervals

- ◆ Discrete time, small set of possible values
- ◆ Dependencies by time between connected items

<i>Function</i>	<i>Assigned to Header</i>	<i>Appeared in</i>	<i>Withdrawn in</i>
gets	stdio.h	1.0	1.2
fgets	stdio.h	1.0	<i>NULL</i>
puts	stdio.h	2.0	<i>NULL</i>

<i>Header</i>	<i>Appeared in</i>	<i>Withdrawn in</i>
stdio.h	1.0	<i>NULL</i>

# LSB Database

## Standardized Elements

- ◆ Information about all LSB versions
- ◆ LSB 4.0: ~**40.000** functions from **57** libraries

## Linux Ecosystem

- ◆ **250** distributions
- ◆ ~**1400** applications

## Auxilliary

- ◆ Test coverage
- ◆ URLs to online documentation for functions
- ◆ ...

# (Partially) Generated Using LSB DB

- ◆ LSB specification text
- ◆ Some test suites for distributions
- ◆ Linux Application Checker
- ◆ LSB Build Environment

# LSB Navigator

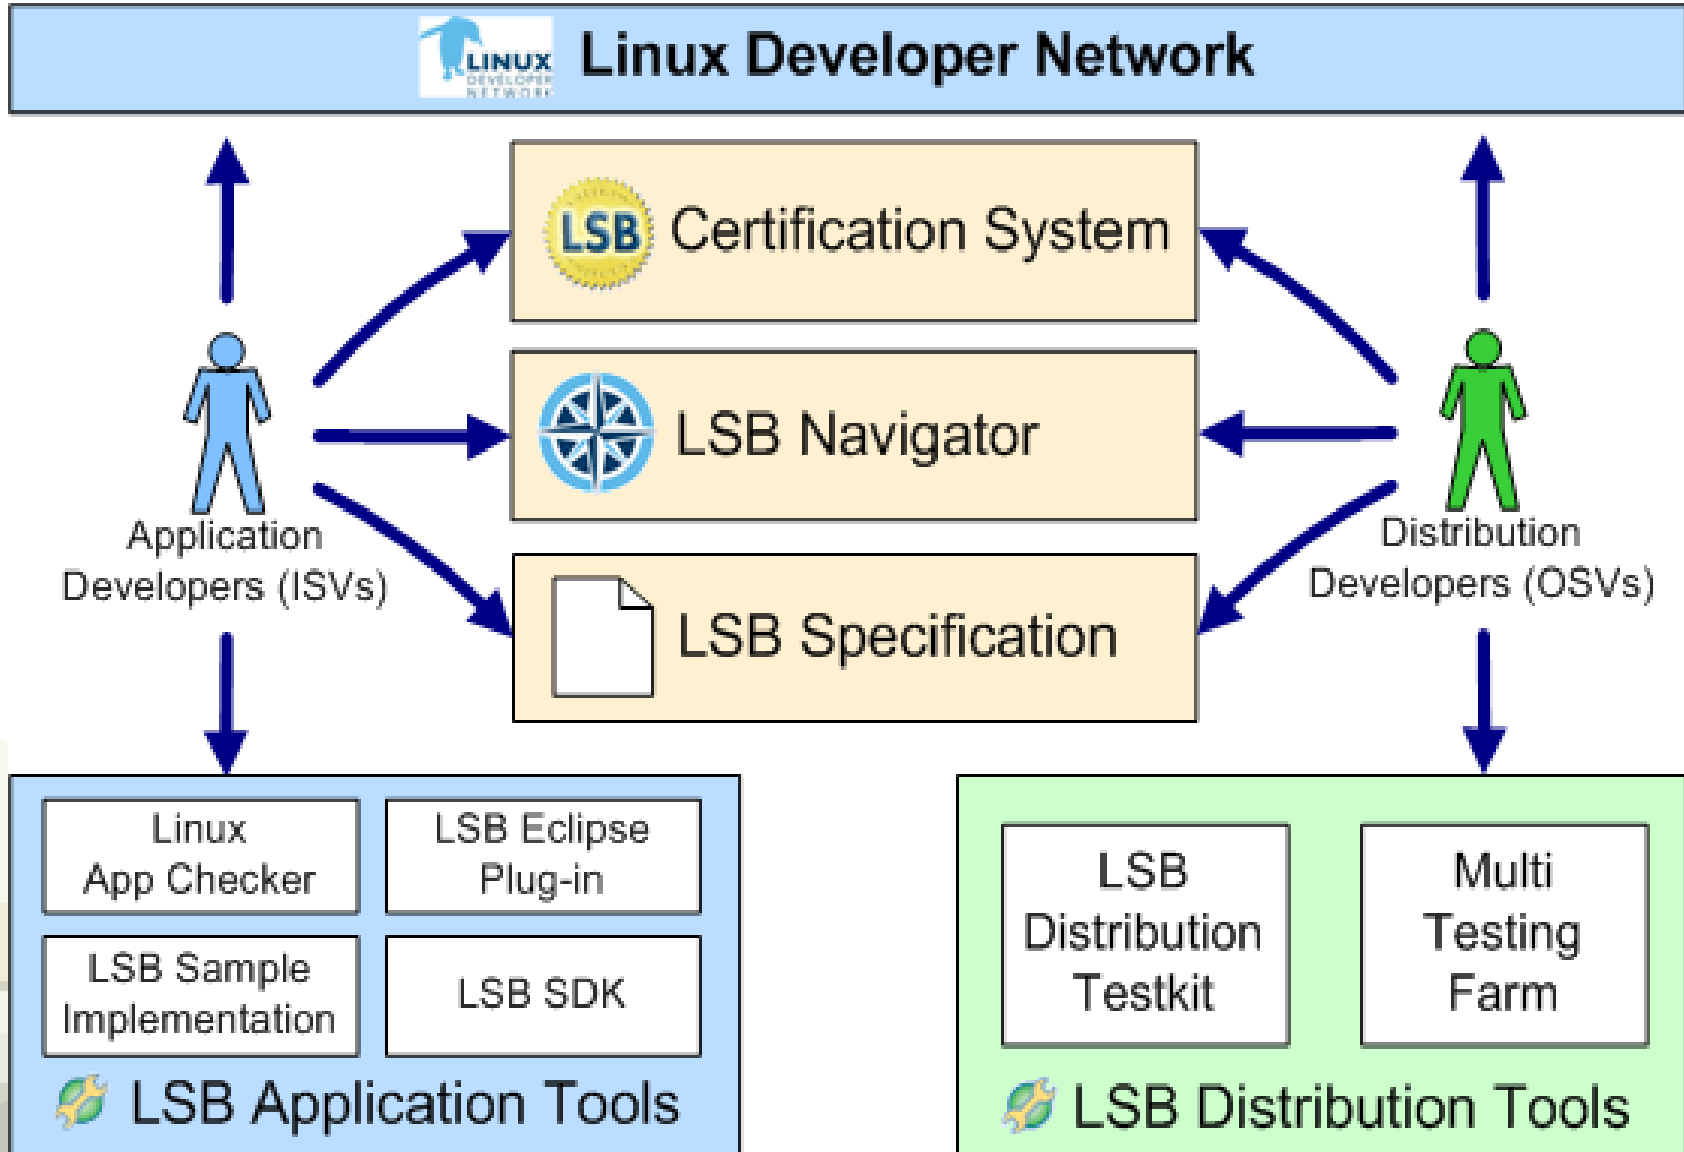

## A Web system upon the LSB DB

- ◆ Browsing the database
- ◆ Statistical queries
- ◆ Analytical queries (decision making support)
  - Interface usage in applications
  - Interface presence in distributions
  - ...
